Expect to be in our practice for between 1 and 2.5 hours.

DURING THE STUDY:

- Your heart rate and blood pressure will be monitored during and after the test and an ECG performed if necessary.
- For CT scans, 1 hour prior to the examination, you will be given a Beta Blocker.
- A small cannula will be placed in your arm to administer IV contrast (containing iodine or gadolinium), required for this examination. **Please let us know if you are allergic to iodine or gadolinium**
- You will be asked to hold your breath, and to lie still while we perform the study.

AFTER THE STUDY:

You will be discharged from the clinic as soon as we have confirmed your heart rate and blood pressure are stable. A full report will be sent to your referring doctor following processing and correlation of the study with the attending Cardiologist and Radiologist.
