DURING THE STUDY:

- Your heart rate and blood pressure will be monitored during and after the test and an ECG performed if necessary.
- A small cannula will be placed in your arm to administer IV contrast (containing iodine or gadolinium), required for this examination.
Please let us know if you are allergic to iodine or gadolinium
- You will be asked to hold your breath, and to lie still while we perform the study.

AFTER THE STUDY:

You will be discharged from the clinic as soon as we have confirmed your heart rate and blood pressure are stable. A full report will be sent to your referring doctor following processing and correlation of the study with the attending Cardiologist and Radiologist.
